GUEST OPINION:

Affordable Housing: NH's Unmet Need For Elders

by Joanne Dodge

As children, we had parents who watched out for us, and who did what they could to provide us with a loving, healthy, active life. If needed, they fought for us too, for programs in the school, outside activities, etc.

When we had children, our parents often were there to pitch in with financial help, care giving, etc.

Now, we who may need caregivers are finding a very different world. Our children are working and busier than we ever were. Many live far away. And we are often alone. And we are living longer.

Too many of our generation have had to move out of our homes because of sickness or financial difficulties. And the options are few. If one is financially sound, there are many senior homes, assisted living facilities and even nursing homes to choose from. But for those living on a low to moderate income, the options are either stay at home or go to a nursing home.

Assisted living is not generally paid for by Medicaid. Some facilities have one or two beds set aside. The cost for an assisted living bed is generally twice the amount that Medicaid pays.

Those who do stay home often have few if any social activities in their lives. Senior Moments performed a play dealing with depression and suicide

prevention. One of skits featured two elderly women who had been best friends for year, sharing the happiness and the pain of raising a family. Now, one is in senior housing; the other is living with her daughter. The only time they can see each other, is if the daughter will drop off her mother, usually for a short time now and then.

Caregivers were once young, so they are aware of many of the needs of a younger generation. Caregivers were never old. This includes doctors, nurses, social workers—anyone who cares for seniors. Very, very few colleges offer courses in

geriatrics, let alone a major. (One college in Maine has a course where students live in a nursing home for two weeks to get a feel for what it's like.)

Caregiving doesn't take into account the individualism of every senior. We are not all alike. We do not all like to play Bingo. It's easier from a caregiver's point of view to plan group activities.

Understanding and acknowledging the fact that seniors are not all the same allows for better and more humane care. It's what we wanted and how we lived when we were young.

Alcoholism is a problem for some, depression for others. Living with the loss of home, or mate, or lifestyle isn't easy. And for those of us who cannot afford choice, true choice, there isn't much else.

These remarks were made at a recent NH State Committee on Aging meeting held in Salem NH. Joanne Dodge represents Strafford County on this Committee.

Caregivers were once young, so they are aware of many of the needs of a younger generation. Caregivers were never old.

From Our Readers

AGING IN PLACE: MADE EASIER BY A VILLAGE NETWORK

by Owen R Houghton

A lot has been said about aging in place in the media—I recently heard an NPR program on the growing need for geriatric care, and read a USA Today article warning of the pressures on social services from the 79 million Baby Boomers turning 65.

I found an article by Howard Gleckman, a resident fellow at the Urban Institute, author of *"Caring For Our Parents"* and a frequent writer and speaker on long-term care issues to be most interesting. Entitled *"Aging In Place Is Not So Easy"*, he indicates that while 'aging in place' is the popular rallying cry in the senior community, living at home is not so easy.

Gleckman asserts that the transition from home to assisted living facilities or nursing homes is driven more by social issues than medical concerns, citing a "lack of qualified caregivers, an absence of basic services such as

transportation, no access to appropriate housing, and loneliness" as primary reasons for leaving one's home.

However, he also suggests that while assisted living and nursing home care may still be necessary for those with no families or those suffering from severe dementia, "if we work at it, we can postpone the transition for months or even years. It is worth trying."

The AARP estimates that 95% of folks over 80 stay in place. Almost everyone could receive the care they need at home, even if they suffer from multiple chronic illnesses, but lack of knowledge and resources often lead to a "give-up" decision by elders and family.

Last fall I attended a conference in Washington, D.C. sponsored by Beacon Hill Village with assistance from the Village to Village Network. The concept being promoted was simple and designed to make aging in place more like it was "back in the day".

One of the speakers from the federal Agency on Aging (AOA) suggested that "staying where I am" is not an aging issue but a "livability issue". The grass roots village movement is at the core of our need to live life as successfully as possible. Folks have come to recognize that their options to remain at home as long as possible increase if they pool their resources and come together to personalize, customize and humanize home and community based services. This is the essence of the village movement which is

sweeping the country. May this be so for all of us.

As one of the founders of an Eastern Monadnock answer to the aging in place trend, I participated in the celebration of the opening of Monadnock at Home in September, remarking that it was very appropriate to be celebrating at the Peterborough Historical Society since Monadnock at Home is part of a village movement which is sweeping the country.

Under the direction of a non-profit Board and Executive Director, the cooperative provides access to a wide range of prescreened providers, transportation to appointments and once-a-week grocery trips, help with simple maintenance or basic technical problems, social and educational opportunities, safety review of the home, telephone check-ins, and volunteer opportunities.

Monadnock at Home members now have another form of long term care insurance which gives confidence and peace of mind to combat the fears and struggles of remaining at home as long as possible. The opportunities to "share the caring" in the member volunteer network adds value to this aging wellness model. More information may be found at www.monadnockathome.org

Owen R. Houghton is a geriatric consultant, a member of Monadnock Senior Advocates and Past Chair of the State Committee on Aging. His focus is aging well. Readers may contact him at nohoughton@myfairpoint.net

News You Can Use

OLDER AND HAPPIER

“As people age, they’re more emotionally balanced and better able to solve highly emotional problems. We may be seeing a larger group of people who can get along with a greater number of people. They care more and are more compassionate about problems, and that may lead to a more stable world. Our findings suggest that it doesn’t matter when you were born. In general, people get happier as they get older.”

“As people get older, they’re more aware of mortality. So when they see or experience moments of wonderful things, that often comes with the realization that life is fragile and will come to an end. But that’s a good thing. It’s a signal of strong emotional health and balance.”

“What this study tells me, aged 30-something, is that being aware of my own mortality now can add value and happiness to my everyday life, that I don’t have to grow old before happiness levels can improve, I merely need to remain mindful that life is fragile. That, of course, may be easier said than done, but it’s a goal worth striving for”, says [Laura Carsensen](#), a psychology professor and director of the Stanford Center

on Longevity.

AGING NH POPULATION PART OF SOLUTION TO SHRINKING BUDGETS

Age 65 is the new 35. Ask almost any Baby Boomer about age and that is what he will tell you.

There are over 170,000 New Hampshire residents over the age of 65, and according to state statistics, that number will double by the year 2030 as Boomers retire. These numbers are cause for concern for some groups that associate an aging population with an increase in need for community services, but Doug McNutt, associate director for advocacy with AARP in New Hampshire, sees seniors as part of the solution for communities, through volunteerism.

"People over 65 are an enormous resource because the population is growing; they have a lot of skills, and they have the desire to help people in their communities, and we have to use them as a resource, and we have to stop thinking of them as a negative and think of them as a positive."

McNutt says 70 percent of New Hampshire's AARP members have expressed the desire to volunteer in their communities and see volunteering as a way to help solve problems.

Libby Hanna is the state program specialist for the Corporation for National and Community Service in Concord; her group oversees three programs that utilize over 3,300 senior volunteers in a number of capacities.

"The amount of work that they

do, and the impact on the communities they have, are just huge, just touching countless lives though mentoring and working with people in their homes, to volunteering in hundreds of different community agencies across the state."

Hanna says volunteers through the Foster Grandparent Program, Senior Companions, and Retired and Senior Volunteer Program (RSVP) collectively log over 600,000 hours per year.

Many people today have more than one email account, usually to separate personal from business activities. There are several different services that offer to transfer your address book information from one account to another.

BE AWARE and read the fine print in the AGREEMENT; be sure that you are not allowing your information to be sold or shared.

Health & Wellness

Expiration Dates on Medications

Have you wondered if medications are useless or dangerous after the expiration dates stamped on the bottles? William McCloskey, interim chair of the Department of Pharmacy Practice at the Massachusetts College of Pharmacy and Health Sciences, says that drug manufacturers don't study what happens to drugs over long periods of time, so there's no way for consumers to know how long a specific drug will last.

For that reason, he recommends a conservative approach. Using a drug a few weeks after the expiration is probably fine, but after a year or more it makes sense to replace it.

If you do choose to take that expired pill, the main risk you're taking is that it won't work. For a headache remedy or cold medicine it may be worth that risk, but for a medication that's critical for your health, "you want to make sure it's potent," McCloskey says.

It should be noted that antibiotic tetracycline, can become dangerous after the expiration date. Other medications are not likely to become toxic or dangerous. Liquids and liquid capsules tend to be less stable than solid tablets.

Storing medications properly can help extend their life. Be sure to follow the instructions on the label.

Source Boston Globe

Purposeful Living

Never a stranger to volunteerism, Mary Perry volunteered when her children were of school age. Upon her second graduation from college, Mary rekindled her lifelong interest that included involvement with the Clamshell Alliance, her church, the first soup kitchen in the state, working tirelessly

with the homeless and with the elderly population of Manchester. When she retired, her volunteerism increased.

At eighty-four, Mary continues to volunteer twice a week at the blood center. As a volunteer there

for more than twelve years, Mary is recognized as a long-time friend and calming influence as she meets old and new donors upon their arrival. She has been described as a caring, helpful, and accommodating volunteer whom everyone loves. She has been recognized by the Red Cross as an outstanding volunteer.

Mary for a time was a regular volunteer for the Elliot Hospital where she annually knitted dozens of tiny knit caps for infants in the neonatal units and prayer shawls for persons suffering from cancer and dealing with end of life issues.

Mary routinely volunteered as a parish nurse, screening elders for evidence of illnesses such as heart disease, high blood pressure, diabetes, and arthritis.

Mary's volunteerism continues as she collects medical supplies to give to groups going to missions in third world countries such as the Dominican Republic and Haiti. She also routinely visits local nursing homes comforting long-time ill friends.

Mary's willingness to give back to the community is an example of dedication and commitment all can learn from. Her allegiance to the

values she learned as a young woman has been passed on to hundreds of others. She has created a legacy that will be hard for those that follow to emulate.

Mary Perry

Mary Perry was a recipient of the 2010 Joseph D. Vaughan Award and she continues to live every day with a purpose.

Board Notes

We hope you have all recovered from the 2010 blizzard, the activities of the holidays, and are ready for the New Year.

Since Election Day, there have been many discussions about the next session of Congress, pondering over our new NH Legislature, and concerns over what will happen now that there has been a shift in the balance of

power. It's interesting that we have come to think that governing is about one side winning and one side losing rather than about assessing the needs of the people and how to best address them.

Have we settled too comfortably into "group think" wanting to surround ourselves with the opinions of only those who think like we do?

Have we forgotten that what makes this country and our State, with the largest legislative body, unique is the capacity for diverse points of view and the freedom to express them?

ENH encourages you to not only speak up, but to listen; great diversity demands great creativity and the best possible solutions.

Happy New Year 2011!
